Project Design Phase
Proposed Solution Template

Date	30 September 2026
Team ID	9100Spark
Project Name	Import Data using Transform Maps
Maximum Marks	2 Marks

Proposed Solution Template:

Theprojectteamhasfilledinthefollowing information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Organizations receive bulk employee data in Excel format and need to move it into ServiceNow. Entering it by hand is slow and error-prone, and repeated imports can create duplicate or wrongly mapped records. Beginners also find it hard to understand how loading, mapping, transforming and verifying data fit together.
2.	Idea / Solution description	Import structured employee data from an external spreadsheet into ServiceNow using Import Sets and Transform Maps. The spreadsheet is loaded into an Import Set table (staging area); a Transform Map maps the source fields (Employee ID, Name, Email, Department, Location) to the target Employee Test table; running the transform creates the records, which are then validated to ensure data integrity. Coalesce on Employee ID updates existing records instead of duplicating them, and reports with a dashboard show the results.
3.	Novelty / Uniqueness	A complete, beginner-friendly, end-to-end import flow – spreadsheet preparation, staging, mapping, transformation, validation and reporting – built with standard ServiceNow features and no custom code. It adds duplicate prevention through Coalesce and a re-import test that shows inserted, updated and ignored counts.
4.	Social Impact / Customer Satisfaction	Saves administrators and HR teams the time of manual entry and reduces data-entry errors, giving them clean, trustworthy employee data. Helps learners gain confidence with the ServiceNow data import process and gives HR clear visibility through reports and a dashboard.
5.	Business Model (Revenue Model)	This is a learning micro project, so it has no direct revenue. Its value is time saved and better data quality for the organization, and the same pattern can be reused in ServiceNow implementation, migration and training work.

S.No.	Parameter	Description
6.	Scalability of the Solution	The Import Set table and Transform Map can be reused for new spreadsheets and larger files. More fields, other target tables, additional transform maps and extra reports can be added without changing the overall process, and Coalesce keeps repeated imports consistent.
