Project Development Phase
PerformanceTesting–DataImport&Transformation

Date	19 January 2026
Team ID	9100Spark
Project Name	Import Data using Transform Maps
Maximum Marks	10 Marks

1. Test Objective

To measure how accurately and efficiently the ServiceNow Import Set and Transform Map load employee data from an Excel spreadsheet (Sample Spreadsheet.xlsx) into the Employee Test (u_employee_test) table, and to confirm that Coalesce on Employee ID prevents duplicate records when the same data is imported repeatedly.

2.TestEnvironment

Component	Details
Platform	ServiceNow instance (Import Sets, Transform Maps, Reports & Dashboards)
Source file	Sample Spreadsheet.xlsx (Employee ID, Name, Email, Department, Location)
Staging (Import Set) table	Employee Import (u_employee_import)
Transform Map	Sample Spreadsheet Import
Target table	Employee Test (u_employee_test)
Coalesce field	Employee ID (u_employee_id)

3.Import&TransformPerformanceResults

Each run was executed with Load Data followed by Run Transform. Counts are taken from the Transform History list.

Run	Scenario	Total Rows	Inserted	Updated	Ignored	Errors	Run Time
1	Initial load of employee spreadsheet	15	15	0	0	0	N/A
2	Modified file: 2 changed rows + 2 new Employee IDs	4	2	2	0	0	1 Second
3	Same file re-imported (Coalesce enabled)	4	0	0	4	0	0 Seconds

4. Performance Parameters

S.No	Parameter	Values	Screenshot / Evidence
1	Data loading	Spreadsheet loaded into u_employee_import; Load Data state Complete with success message	Load Data progress screen
2	Field mapping	5 of 5 source fields mapped to target fields (Employee ID, Name, Email, Department, Location)	Transform Map – Field Maps list
3	Transform success rate	3 of 3 transform runs completed with state Complete and code Success; 0 errors	Transform History list
4	Data accuracy	17 records in Employee Test after Runs 1 and 2 (15 + 2 new); 2 changed records updated correctly	Employee Test list view

S.No	Parameter	Values	Screenshot / Evidence
5	Duplicate prevention	Re-import of identical data inserted 0 and updated 0 records; 4 ignored	Transform History – Run 3 Transform History – Run Time
6	Processing time	Transform runs completed in 1 second or less for the test data	column
7	Reporting output	3 reports (Department, Location, List) render correctly as dashboard widgets	Employee Analytics Dashboards

5. Conclusion

Theimport completed without errors in every run. Records were inserted and updated as expected, and enabling Coalesce on Employee ID removed duplicate insertions during repeated imports. Small batches transform in about a second, which meets the needs of this micro project.
