Project Name	Import Data using Transform Maps
Maximum Marks	2 Marks

Problem – Solution Fit Canvas:

Thecanvasmapsthe customer,the problem, its root cause and the customer's behaviour to the proposed ServiceNow import solution.

Define CS, fit into CC

1. CUSTOMER SEGMENT(S) [CS]

- Beginner ServiceNow administrators and learners
- HR / data teams that receive bulk employee data as Excel spreadsheets and must load it into ServiceNow

6. CUSTOMER CONSTRAINTS [CC]

- Limited ServiceNow experience; many menus and steps to follow
- Needs an administrator role and ACL access to load data and create dashboards
- Source data must be a structured .xlsx file with correct column headers
- Imported data must be accurate; time is limited

5. AVAILABLE SOLUTIONS [AS]

- Manual entry of each employee record – slow and error-prone
- Importing a file without field mapping or a unique key – wrong values and duplicates
- Custom scripts or integrations – need coding skills

Explore AS, differentiate

Focus on J&P, tap into BE

2. JOBS-TO-BE-DONE / PROBLEMS [J&P]

- Move bulk employee data from Excel into a ServiceNow table accurately
- Map spreadsheet columns to the correct table fields
- Avoid duplicate employee records on repeated imports
- Verify what was inserted, updated or ignored
- Give HR a clear view of employee data

9. PROBLEM ROOT CAUSE [RC]

- Employee data starts outside ServiceNow, in spreadsheets, in a different structure from the platform tables
- Manual re-entry causes mistakes
- Without a unique key (Coalesce), repeated imports create duplicates
- Beginners do not know how Import Sets and Transform Maps fit together

7. BEHAVIOUR [BE]

- Prepares the spreadsheet and downloads it as .xlsx
- Uploads it with Load Data and builds a Transform Map
- Runs the transform and checks the target table
- Re-imports updated files and reads Transform History
- Follows guides or asks teammates for the steps

Focus on J&P, tap into BE, understand RC

Identify strong TR & EM

3. TRIGGERS [TR]

- A new or updated employee spreadsheet arrives
- Many employees must be onboarded at once
- Duplicate or wrong records are noticed
- HR asks for employee insights by department or location

4. EMOTIONS: BEFORE / AFTER [EM]

- Before: anxious about wrong mapping and duplicates; overwhelmed by the steps
- After: confident, in control and able to trust the data

10. YOUR SOLUTION [SL]

- Load the spreadsheet into an Import Set (staging) table
- Create a Transform Map with Auto Map Matching Fields to the Employee Test table
- Enable Coalesce on Employee ID so repeated imports update instead of duplicate
- Run the transform and validate results in Transform History and the target table
- Add reports (Department, Location, List) and an Employee Analytics Dashboard

8.1 ONLINE CHANNELS [CH]

- ServiceNow web UI: Load Data, Transform Maps, Tables, Reports and Dashboards
- Google Sheets to prepare and export the .xlsx file
- Online step-by-step guides and learning tasks

8.2 OFFLINE CHANNELS [CH]

- Receiving the spreadsheet from HR or teammates
- Team discussion about mapping and validation results

Extract online & offline CH of BE

Fit summary: the solution addresses the customer's main job-to-be-done (moving Excel employee data into ServiceNow accurately) and removes the root causes (manual re-entry, no field mapping, no unique key) using channels the customer already uses – the ServiceNow web UI and spreadsheets.
