Ideation Phase
Brainstorm & Idea Prioritization Template

Date	30 September 2026
Team ID	9100Spark
Project Name	Import Data using Transform Maps
Maximum Marks	4 Marks

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Selected problem statement (How Might We): How might we import bulk employee data from an Excel spreadsheet into ServiceNow quickly and accurately, without duplicates, using Import Sets and Transform Maps?

Team Member	Focus Area in the Brainstorm
Praveen kumar G	Spreadsheet preparation and creation of the target table
Naresh S	Import Set table, Transform Map, and transform & validate
Vignesh S	Coalesce to avoid duplicates and re-importing new data
Praveen kumar G	Reports and dashboards for employee data

Key rules followed: stay on topic, defer judgment, encourage wild ideas, go for volume, listen to others, and be visual where possible.

Step-2: Brainstorm, Idea Listing and Grouping

Ideas written down by each team member for the selected problem statement:

Team Member	Idea 1	Idea 2	Idea 3
Praveen kumar G	Create a sample spreadsheet with Employee ID, Name, Email, Department, Location	Download the sheet as Sample Spreadsheet.xlsx	Create a custom target table Employee Test (u_employee_test) with String fields
Naresh S	Load the Excel file into the Import Set table Employee Import (u_employee_import)	Create a Transform Map and use Auto Map Matching Fields	Run the transform and check the records in the target table
Vignesh S	Enable Coalesce on the Employee ID field	Re-import a modified sheet to test inserts and updates	Verify inserted, updated and ignored counts in Transform History
Praveen kumar G	Report: Employees by Department (pie chart)	Reports: Employees by Location and Employee List	Combine reports in an Employee Analytics Dashboard

Grouped ideas (clusters):

Group	Ideas in the Group
1. Data Preparation	Sample spreadsheet with employee fields; download as .xlsx; create the target table Employee Test
2. Staging & Mapping	Load data into the Import Set table; create the Transform Map; auto-map source to target fields
3. Transformation & Data Integrity	Run the transform; Coalesce on Employee ID; re-import modified data to test updates without duplicates
4. Validation & Insights	Check Transform History; verify records in the target table; reports and dashboard for employee data

Step-3: Idea Prioritization

Each idea is rated on Importance (impact on the outcome) and Feasibility (cost, time, effort, complexity) using High / Medium / Low.

Idea	Importance	Feasibility	Priority
Load spreadsheet data into an Import Set (staging) table	High	High	1 – Do first
Create a Transform Map with field mapping to the target table	High	High	1 – Do first
Run the transform and validate records in the target table	High	High	1 – Do first
Prepare a sample spreadsheet (.xlsx) and create the target table	High	High	1 – Do first
Enable Coalesce on Employee ID to avoid duplicates	High	Medium	2 – Do next
Re-import modified data and review Transform History	Medium	High	2 – Do next
Reports (Department, Location, List) and a dashboard	Medium	Medium	3 – Enhancement
Restrict report sharing by users, groups and roles	Low	Medium	4 – Later

Outcome: The high-importance, high-feasibility ideas form the core of the project: prepare the spreadsheet and target table, load it into an Import Set table, build the Transform Map, run the transformation, and validate the results. Coalesce and reporting are added afterwards as enhancements.
