Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	30 September 2026
Team ID	9100Spark
Project Name	Import Data using Transform Maps
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FRNo.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Spreadsheet Preparation	Create a Google Spreadsheet with sample employee data (Employee ID, Name, Email, Department, Location); download it as Sample Spreadsheet.xlsx
FR-2	Target Table Creation	Create the custom table Employee Test (u_employee_test); add String fields Employee ID, Employee Name, Email, Department and Location using Form Layout
FR-3	Data Loading (Import Set)	Load the .xlsx file using System Import Sets → Load Data; create the Import Set table Employee Import (u_employee_import) as a staging table; confirm the success message
FR-4	Field Mapping (Transform Map)	Create the Transform Map Sample Spreadsheet Import with source Employee Import and target Employee Test; use Auto Map Matching Fields; verify all five field maps
FR-5	Data Transformation & Validation	Run the transform from the Transform Map; confirm state Complete / Success; verify inserted records in the Employee Test table and arrange columns using Personalize List Columns
FR-6	Duplicate Prevention (Coalesce)	Enable Coalesce on the Employee ID field map; re-import modified data so existing records are updated and only new Employee IDs are inserted; review Inserts, Updates and Ignored counts in Transform History
FR-7	Reports & Dashboard	Create reports Employees by Department (pie chart), Employees by Location and Employee List Report; create the Employee Analytics Dashboards dashboard and add the reports to it; restrict sharing by users, groups and roles

Non-functional Requirements:

Followingarethenon-functionalrequirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	Step-by-step navigation through standard ServiceNow modules (Load Data, Transform Maps, Tables, Reports) so a beginner can complete the import without writing code; Auto Map Matching Fields reduces manual mapping effort
NFR-2	Security	Only authorised users (administrators) can load data, edit Transform Maps and create dashboards; dashboard creation is governed by the pa_dashboards ACL (Admin overrides); report and dashboard sharing can be restricted by users, groups and roles
NFR-3	Reliability	Import Set staging table separates loading from transformation; Coalesce on Employee ID ensures repeated imports update existing records instead of creating duplicates; every run is recorded in Transform History
NFR-4	Performance	Spreadsheet rows are bulk-loaded and transformed in a single run instead of manual entry; the run completes with a success state and inserted / updated / ignored counts for quick verification
NFR-5	Availability	The solution runs on the cloud-hosted ServiceNow instance and is available through a web browser whenever the instance is available; imports can be re-run at any time using the same Transform Map
NFR-6	Scalability	The same Import Set table and Transform Map can be reused for new spreadsheets with more rows or new employees; additional fields, target tables or reports can be added without redesigning the process
